### Problem 1

1/1 point (graded)

What is the projection of the i'th coordinate direction onto the j'th coordinate direction, for  $i \neq j$ ?

- 0
- $\bigcirc$  1
- $\bigcirc \sqrt{2}$
- O 2
- ~

Submit

### Problem 2

1/1 point (graded)

What is the unit vector in the direction of (4, 1, 1, 9, 1)?

- $\bigcirc (\frac{1}{4}, \frac{1}{16}, \frac{1}{16}, \frac{9}{16}, \frac{1}{16})$
- $\bigcirc (\frac{1}{4}, \frac{1}{12}, \frac{1}{12}, \frac{1}{2}, \frac{1}{12})$
- $\bullet (\frac{2}{5}, \frac{1}{10}, \frac{1}{10}, \frac{9}{10}, \frac{1}{10})$
- $\bigcirc (\frac{1}{5}, \frac{1}{20}, \frac{1}{20}, \frac{9}{20}, \frac{1}{20})$

Submit

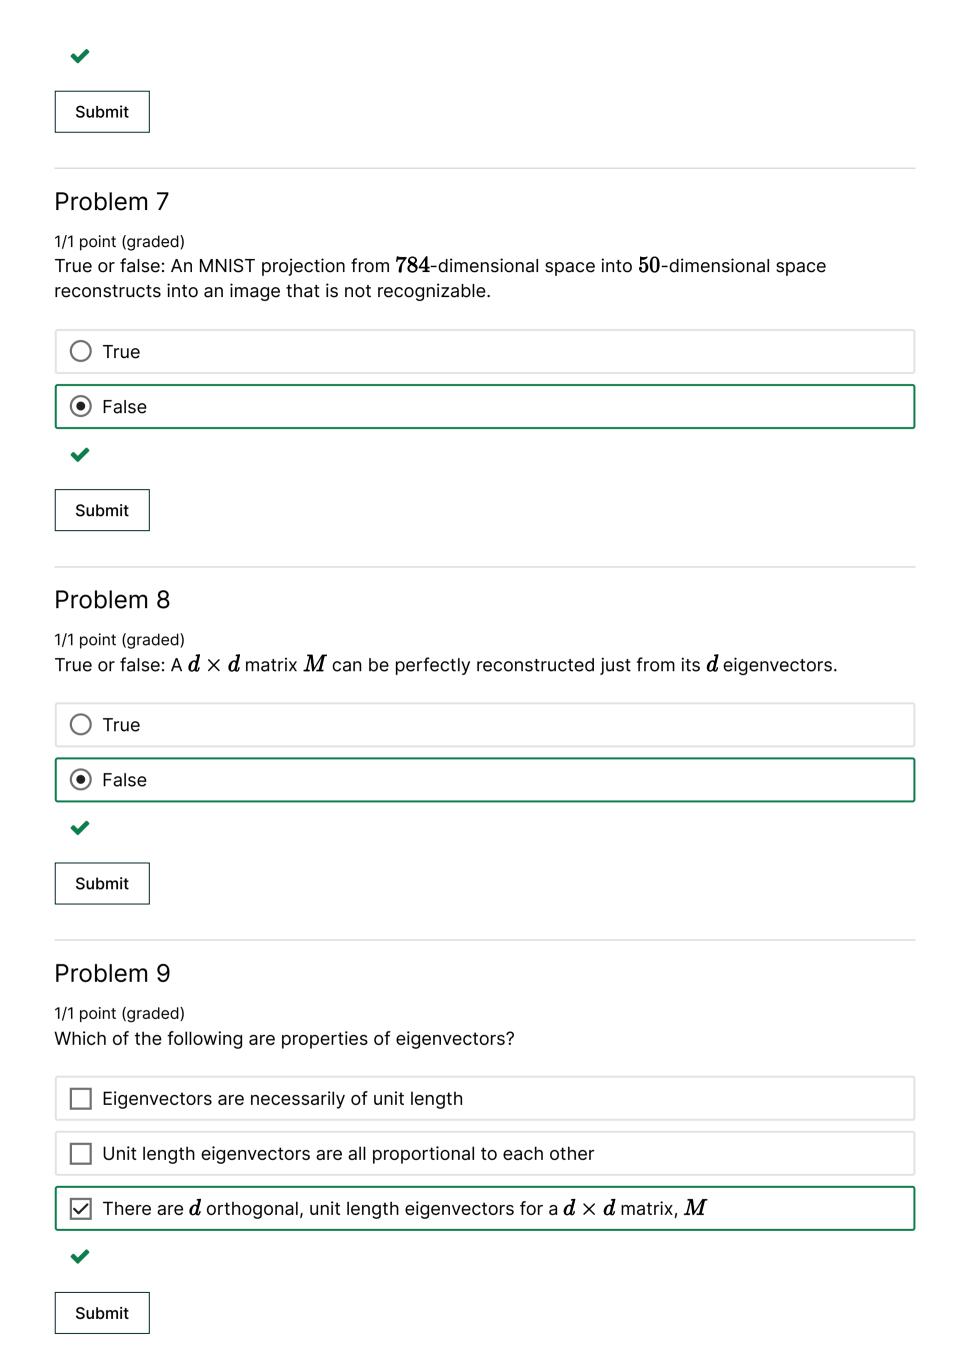

### Problem 3

1/1 point (graded)

Given a data set with the covariance matrix,  $\Sigma=\begin{pmatrix}1&0.6\\0.6&0.25\end{pmatrix}$  , find the variance in the direction of (1,1).

- $\bigcirc$  0.655
- 1.225
- $\bigcirc$  2.450
- O 1.667

Submit
Problem 4
1/1 point (graded) Given a data set, $X$ , represented by the covariance matrix $\Sigma$ , which of the following expressions gives the variance of $X$ in the direction of $u$ ?
$\bigcirc \ \Sigma^{-1} u$
$left{igorowthat{\odot}} u^T \Sigma u$
$\bigcirc \ u^T u  \Sigma $
$\bigcirc \ u\Sigma u^T$
✓
Submit
Problem 5
1/1 point (graded) Which of the following are characteristics of a set of orthonormal vectors?
All of the vectors point in the same direction
lacksquare All of the vectors have length $f 1$
All of the vectors are orthogonal to each other
$\square$ All of the vectors have exactly one non-zero component, e.g. $(0,0,1,0,0)$
Submit
Problem 6
1/1 point (graded) Say you want to project points $x\in\mathbb{R}^4$ onto three directions $u_1$ , $u_2$ , and $u_3$ . This projection can be realized by multiplying $x$ by a matrix of what dimension?
$\bigcirc$ 4 × 3
$\bigcirc$ 4 × 4
$\odot$ 3 × 4
$\bigcirc$ 3 $ imes$ 1

### Problem 10

1/1 point (graded)

For the matrix, 
$$M=egin{pmatrix}1&1&4\\1&-1&0\\0&1&3\end{pmatrix}$$
 , is the vector  $w=rac{1}{\sqrt{17}}(0,4,-1)$  an eigenvector?

If so, what is the eigenvalue for that eigenvector?  $\bullet$  Yes, eigenvalue = -1 $\bigcirc$  Yes, eigenvalue = 2 O Yes, eigenvalue =  $-\frac{1}{2}$ No, not an eigenvector Submit Problem 11 1/1 point (graded) Suppose  $m{M}$  is a symmetric matrix. Let  $m{U}$  be the matrix whose columns are the eigenvectors of  $m{M}$ , and let  $oldsymbol{\Lambda}$  be the diagonal matrix whose entries are the eigenvalues of  $oldsymbol{M}$ . Which of the following expressions is equivalent to the matrix product Mx?  $\bigcirc Mx = UU^Tx$  $leftondown Mx = U\Lambda U^T x$  $\bigcirc Mx = U\Lambda Ux$  $\bigcirc Mx = U\Lambda^{-1}U^Tx$ Submit Problem 12 1/1 point (graded) When we represent data in the basis given by the eigenvectors of the covariance matrix, are the features less correlated or more correlated than when representing the same data in the standard basis?

Less correlated
