Programming Assignment 8

🔖 Bookmark this page
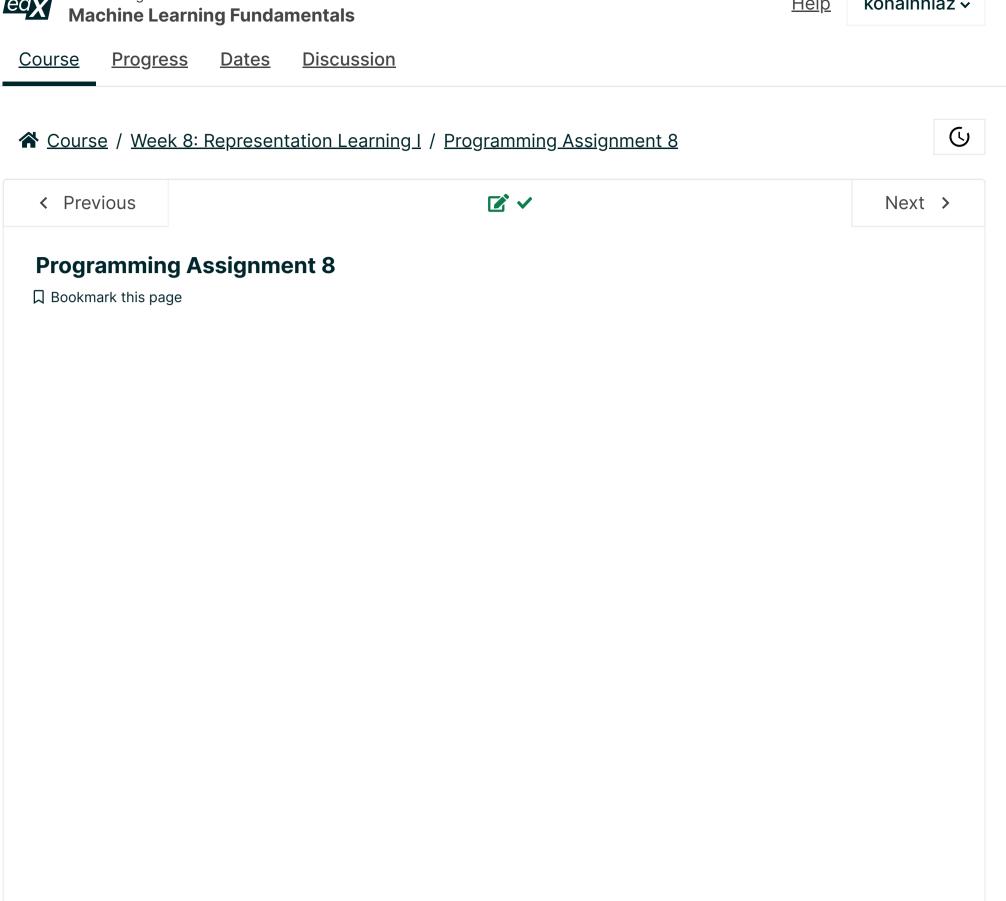

Programming Assignments due Jul 26, 2022 23:00 PKT   Completed

Click this link to download the Animals Clustering notebook and then complete problems 1-4.

Problem 1

1/1 point (graded)
What initialization method was used for k-means in the notebook?

- ○ The k-means++ algorithm was called
- ⦿ k centers were chosen at random from the data points
- ○ The first k data points were chosen as centers

✔

Submit

Problem 2

1/1 point (graded)
Based on your experiences with k-means, which of the following statements seems the most accurate?

- ⦿ In general, the k-means cost function has multiple local optima
- ○ Lloyd's algorithm does not necessarily find a local optimum of the k-means cost function
- ○ Lloyd's algorithm finds the global optimum of the k-means cost function

✔

Submit

Problem 3

1/1 point (graded)
Does it make sense to run Ward's hierarchical clustering algorithm several times on the same data set?

- ⦿ No, because it returns the same result every time
- ○ Yes, because it may return different results every time and we can choose the best of them
- ○ Yes, because it always returns different results, and we can combine them into a single good hierarchy

✔

Submit

Problem 4

1/1 point (graded)

What was your experience with the running times of the two clustering methods in the notebook?

○ Both took a long time

○ k-means was fast, but hierarchical clustering took a long time

○ Hierarchical clustering was fast, but k-means took a long time

● They were both fast, because the data set was small

✔

Submit
